

# ADMIN MODE

Passcode: 064979

MARCH 30, 2020  
DOCUMENTATION

## Functionality:

The admin mode allows the user to alter the pre-defined Pin (3952). Once the admin passcode was verified, the user was given the choice of deleting and changing the Pin by pressing '\*'. Assuming that the button is pressed, the pin was deleted by inputting zeros into the array and the user was prompted for the new pin. After displaying the pin, the system returns to the disarmed state where the new Pin was utilized.
